

x= wird in der Bilanz nicht berücksichtigt bzw. ist aus technischen Gründen nicht mit RC-Anteil auszuführen
ja/nein= enthält es RC-Anteile entsprechend dem Mindestwert "erheblichen Anteil" ?
Es können entweder Breite/Höhe/Dicke eingegeben werden oder das Volumen und Dichte direkt.

1

Vollholz mit FSC/PEFC Zertifikat = 100% zertifizierter Anteil
Holzwerkstoff oder Vollholz mit MIX FSC/PEFC Zertifikat = üblicherweise 50-70% zertifizierter Anteil
Holzwerkstoff oder Vollholz ohne FSC/PEFC Zertifikat = 0% zertifizierter Anteil

2

| | | | | | | | | | | | |
|---|--|--|--|--|--|---|--|--|--|--|--|
| Erhebliche Anteile & Systemgrenzen | | | | | | | | | | | |
| Es werden nur RC-Anteile mit erheblichen Anteil für die QNG-Förderung anerkannt. Die Interpretation des erheblichem Anteil, technischer Ausnahmen (wie bspw. WU-Betonen) sowie die Systemgrenzen können sich je nach Kondomitätsprüfstelle (BNB oder DGNB) unterscheiden. | | | | | | | | | | | |
| Im folgenden sind die Auslegungen dragestellt. | | | | | | | | | | | |
| | | | | | | | | | | | |
| Neueingebrachte Erdbaustoffe | | | | | | | | | | | |
| Erhebliche Recyclinganteile | | | | | | Systemgrenzen | | | | | |
| Für die Erbaustoffe ist der erhebliche Anteil nicht an zulässige Werte wie beim Beton geknüpft und ein erheblicher Anteil nicht konsequent definiert. Das ZertNG (BNB) als Prüfstelle hat im folgenden genannte Werte definiert. Die DGNB als Prüfstelle hat bisher keine Definition veröffentlicht, daher wird der erhebliche Anteil nach BNB (ZertNG) angenommen. | | | | | | Als Systemgrenze ist das Gebäude zu betrachten. Innerhalb: - Innenhöfe - Gründächer - Verfüllung der Baugrube unterhalb der vertikalen Projektion der Außenwände - bitte gesondert aufführen: Verfüllung der restlichen Baugrube | | | | | |
